SENTINELBLUE

Cybersecurity & Compliance for Maritime Defense Companies

MANAGED SECURITY & CMMC SERVICES FOR MARITIME & SHIPBUILDING FIRMS

As the U.S. Navy works to expand fleet capacity, shipbuilding primes are leaning harder on small and mid-sized suppliers, fabricators, and ship repair firms. Sentinel Blue offers deep DIB expertise for maritime and shipbuilding organizations, including CMMC-compliant cloud environments, continuous security monitoring, and vCISO guidance built around how shipyards and marine suppliers actually operate.

Protecting the Data Behind Every Hull

Maritime suppliers handle some of the most sensitive data in the Defense Industrial Base, including naval engineering blueprints, export-controlled technical information, large CAD files, and more. And they do so in complex working environments, with welding systems, CNC machines, shared workstations, and other OT equipment sitting on the same networks as business systems.

To keep CUI and other sensitive data safe, Sentinel Blue segments industrial and OT systems from enterprise IT, building secure environments for working with controlled data and extending protection from your fabrication hall to your offices. Our Overwatch SOC team provides continuous monitoring for those environments, detecting and responding to threats before they disrupt your operations.

Why Sentinel Blue

- Security built around your industrial environment
- Consistent protection across fabrication shops, dry docks, and waterfront sites
- Continuous monitoring and DIB expertise from U.S.-based SOC team
- Hands-on CMMC compliance support through assessment day and beyond

Compliance from the Front Office to the Waterfront

Our Pathfinder team builds and maintains your compliance program, from SSP development and POA&M management through your CMMC Level 2 assessment and every assessment cycle that follows. Meanwhile, our vCISO advisors help you plan security investments ahead of new contracts, facilities, and programs, so your security posture keeps pace as your business grows.

BENEFITS FOR MARITIME & SHIPBUILDING COMPANIES

- **GCC High Migration:** A compliant cloud environment with clearly defined boundaries for storing and sharing CUI and export-controlled technical data.
- **Secure Technical Data Collaboration:** Controlled file sharing and access management for engineering drawings and large CAD files exchanged with primes and partners.
- **OT & Industrial Network Segmentation:** Separation of welding, cutting, and other shop floor systems from business networks, with tailored strategies for legacy equipment.
- **Frontline & Shared Workstation Security:** Identity, MFA, and access controls designed for skilled trades workers on shared terminals.
- **Multi-Site Protection:** Security across fabrication facilities, dry docks, waterfront sites, remote work locations, and more.
- **Continuous Security Monitoring:** Ongoing threat detection and response from a dedicated SOC team.
- **vCISO Advisory:** Risk-based roadmaps, clear milestones, and budgeting guidance tailored to your contracts and growth plans.
- **Assessment Readiness & Ongoing Compliance:** Support from preliminary scoping through your CMMC Level 2 assessment and future regulatory requirements.

> Sentinel Blue has taken the time to actually understand what we're building, so they're already thinking a step ahead with us. As we onboard new technologies and develop new models, we can work together so the probability of success is higher from day one.

About Sentinel Blue

Sentinel Blue is a CMMC leader and managed security service provider bringing the power of enterprise cybersecurity tools to federal contractors of all sizes. Specializing in emerging technologies and digital transformation, Sentinel Blue offers comprehensive, scalable, end-to-end cybersecurity solutions for clients and partners within the Defense Industrial Base and other highly regulated industries. **Learn more here.**
